EDUCATION

University of California, San Diego (UCSD) *Expected May 2027*
Bachelor of Science, Computer Science — GPA: 3.75

Orange Coast College *August 2025*
Certificate of Specialization, C++ Programming — GPA: 3.91

EXPERIENCE

Code2Career — Mentee *03/2026 – Present*
- Selected as 1 of 250 students (from 1,500 applicants) for a 10-week mentorship with a Google Software Engineer focused on data structures, algorithms, and technical interviews
- Solved 20+leetcode style problems using a variation of algorithms, such as dynamic programming and greedy, and many different data structures, from arrays and lists to hash maps to disjoint sets
- Significantly improved myself with live mock interviews with my mentor

KPMG — Risk Consulting Intern *01/2024 – 02/2024*
- Assisted Senior Risk Consultants in researching Basel III implementation for enterprise clients in Vietnam
- Collaborated with a cross-functional team to assess financial risk exposure for enterprise clients in a fast-paced, deadline-driven environment

Orange Coast College — Restaurant Staff (Part-Time) *10/2023 – 12/2023*
- Maintained service quality and accuracy while handling high customer volume under time pressure, developing adaptability and time-management skills

PROJECTS

Custom Unix-Style Shell *C*
- Built a Unix-style shell supporting both interactive and batch (script) execution modes, with built-in commands (cd, exit, history) and program execution via fork(), execvp(), and wait()
- Implemented persistent command-history logging to a hidden dotfile and whitespace-tolerant input parsing (strtok) to robustly handle arbitrary spacing/tabs between arguments
- Added error handling for system-call failure paths (fork, execvp, chdir, fopen) with precise perror() reporting and usage-error detection for malformed built-in commands

Simplified Memory Allocator *C*
- Implemented a custom malloc/free (vmalloc/vmfree) in C using a best-fit allocation policy, traversing the heap to select the smallest sufficiently large free block
- Designed block header/footer metadata with a "previous-block-busy" bit, enforcing 16-byte aligned allocations and splitting oversized blocks to minimize wasted space
- Implemented free-block coalescing with adjacent blocks to reduce heap fragmentation

2-Player Basketball Shooting Game *JavaScript*
- Built an interactive 2-player browser game using JavaScript, with a scoring system and compatible with both touchpads and mouses

SKILLS & ACTIVITIES

- Languages: C++, C, Java, JavaScript, Python
- Systems & Tools: Git/GitHub, VS Code, Linux, GDB, Vim
- Software Engineering: Data Structures, Algorithms, System Programming, Debugging
- Achievements: 2nd Place, District Coding Competition (2019); OCC President's List; UCSD Provost Honors

RELEVANT COURSEWORK

- Data Structures & Algorithms, Design & Analysis of Algorithms, Machine Learning, System Programming & Software Tools, Computer Architecture & Organization, Databases, Software Engineering, Discrete Structures, Computation Theory
